Bryce Rambach

Brisbane, Australia, moving to Incline Village, NV in October 2026 (US citizen)
bryce.rambach@gmail.com | linkedin.com/in/bryce-rambach | github.com/brambach | brycerambach.com

Integration engineer and independent product builder. **Sole technical hire** across 6+ concurrent enterprise client engagements at an AI-native consultancy, owning everything from OAuth flows to **real-time failure diagnosis**. Built and launched **Dervo**, a macOS app for overseeing **Claude Code and Codex agent sessions**, now in private beta with active testers. Built a **production LLM operations platform** on the Claude API, adopted as the company's primary ops tool. Uses Claude Code and AI-assisted workflows daily.

SKILLS

Languages: Python, TypeScript, JavaScript/Node.js, SQL (PostgreSQL, SuiteQL)
Integrations: REST APIs, OAuth 2.0, webhooks, data pipelines, routing and enrichment, queueing/retries, rate limiting, pagination, schema normalization, Workato, Postman
AI / Product: Anthropic Claude API, OpenAI Codex, LLM-powered features, coding-agent tooling and session management, agent design, prompt engineering, eval-driven iteration, RAG, Claude Code
Full-Stack: Next.js, React, Tailwind CSS, Drizzle ORM, Postgres, Clerk, Vercel
Enterprise Platforms: HiBob, NetSuite, MYOB, KeyPay, Employment Hero, Deputy, Slack, Freshdesk, Resend

EXPERIENCE

Founder and Engineer, Dervo (trydervo.com) 2026 - Present · Brisbane, Australia

macOS app (Apple Silicon) giving developers a live board over their Claude Code and Codex runs (what finished, what is stuck, what needs them), with durable per-project working-state records so sessions can hand off across providers.

- **Designed and built Dervo solo, end to end:** product concept, positioning, implementation, beta infrastructure, and support. Runs locally on the Claude Code and Codex subscriptions users already pay for.
- **Launched a waitlist-only private beta** (60+ builders on the waitlist); personally onboarded the first cohort of testers and iterate weekly on activation using real session and error data.
- Dogfood it as a primary work tool: **1,500+ tasks dispatched**, median under 1 min, driving microtask dispatch design.
- Recruited testers and advocates through personalized cold outreach to senior builders (nearly 40 emails), **converting replies into beta users** and product feedback.

Integration Specialist, Digital Directions Mar 2025 - Oct 2026 · Brisbane, Australia

AI-native HR tech consultancy: HiBob, KeyPay, NetSuite, MYOB, and Deputy integrations for ANZ enterprise clients.

- **Own 6+ enterprise client integrations end to end** as the sole technical point of contact: scope, design, build, and debug failures in real time without waiting for direction.
- Build and operate data pipelines handling 500+ records per sync cycle across systems with incompatible APIs, auth, and data formats, keeping production payroll, HR, and financial data reliable.
- **Diagnose and resolve OAuth conflicts, webhook drops, serialization errors, and rate-limit failures** across 10+ live integrations, often under active customer pressure on business-critical workflows.
- Designed and built reusable TypeScript/Node.js connector frameworks from scratch: webhook routing, queueing, retries, and multi-step enrichment pipelines.
- **Deployed production AI systems on the Claude API** to automate integration monitoring and error triage across all live client environments, replacing manual work that took hours of team time daily.
- Built monitoring dashboards for sync status, error rates, and data quality; **own observability and alerting** end to end.

PROJECTS

Digital Directions Client Portal | Production AI Operations Platform 2025 - 2026

TypeScript, Next.js 15, Postgres, Vercel, Anthropic Claude API

- **Solo-built a full-stack agentic operations platform** on the Claude API, adopted as the company's primary ops dashboard, replacing manual ticket triage and fragmented Slack monitoring.
- Synthesizes live signals from 10+ client integrations into real-time observability: sync health, error diagnostics, cron-based health checks, and automated alerting.
- **Owned the outcome:** spotted the gap, built it unprompted, shipped to production, iterated on real team usage.

Throughline | AI Engineering-Update Product · *TypeScript, Next.js, Claude API, GitHub and Slack OAuth* 2026

- Built an AI workflow that reads GitHub and Slack activity and generates daily engineering updates organized by theme; implemented OAuth, per-user scheduling, timezone-aware dispatch, and channel/repo selection.
